

MANYAM NAVEEN

Java Backend Developer | Spring Boot | REST APIs | 3.8+ Years Experience

Palwancha, India 507115 | +91 9398365948 | naveenmanyam12@gmail.com | linkedin.com/in/naveenmanyam

PROFESSIONAL SUMMARY

Java Backend Developer with 3.8+ years of experience building and maintaining production REST APIs with Java and Spring Boot. Recently delivered payments, collections and AI-integrated lending platforms end to end, from PostgreSQL schema design to third-party integrations (PhonePe, MSG91, India Post, credit bureaus). Skilled in Spring Security (JWT, RBAC), Redis, AWS S3, Docker and API design, and experienced collaborating with frontend, QA and AI teams in fast-paced environments.

TECHNICAL SKILLS

Languages: Java 21, Java 8, SQL

Frameworks & Libraries: Spring Boot 3, Spring MVC, Spring Security (JWT, RBAC), Spring Data JPA, Hibernate, Spring Scheduler

Databases: PostgreSQL, Oracle, SQL Server

Caching & Storage: Redis, AWS S3

Cloud & Tools: AWS (EC2, S3, IAM, SNS, SQS, Elastic Beanstalk, ECR), Docker, Git, Maven, JIRA, Postman, Swagger / OpenAPI

API & Integration: RESTful APIs, SOAP Web Services, JSON, XML, YAML, PhonePe, MSG91, India Post APIs, third-party credit and underwriting APIs

Concepts: OOP, SOLID, Low-Level Design, Design Patterns (Singleton, Factory), Multi-tenant Design, Async and Batch Processing, Multithreading, Collections, Streams and Lambdas, Exception Handling, Monolithic Architecture

Frontend Integration: React, AngularJS

WORK EXPERIENCE

Java Backend Developer | FinxBridge / ArcLend

Aug 2025 – Present (FinxBridge: Aug 2025 – Jul 2026; ArcLend: Aug 2026 – Present)

Payments Bridge (Aug 2025 – Dec 2025)

Java 21, Spring Boot 3, PostgreSQL, React, JWT

- Designed and built a payments middleware between merchants and PhonePe end to end: backend APIs, PostgreSQL schema and React frontend (built with AI-assisted development).
- Integrated PhonePe offline flows (Dynamic QR, Payment Link, Collect Call) and online flows (Payment Gateway, Paylinks, Autopay).
- Implemented webhooks, refunds, payment status checks, and automatic cancellation or expiry of unpaid payments, following PhonePe guidelines.
- Built a multi-merchant-ready architecture with merchant onboarding and JWT-based role-based access control.
- Live in production and integrated with the Collections platform for repayments.

Collections Platform (Dec 2025 – Present)

Java 21, Spring Boot 3, PostgreSQL, Redis, AWS S3, Swagger

- Sole backend developer: designed the database schema and all backend APIs end to end for a loan-collections platform covering overdue case management, campaigns, telecalling, repayments, reminders, OTS and PTP.
- Built case intake from the LOS through scheduled API syncs, and bulk CSV ingestion using asynchronous batch processing in chunks of 1,000 records.
- Built a rule-based strategy engine on Spring Scheduler with rules on days past due (DPD), region (state, city, ZIP), overdue amount, execution time and active/inactive status, triggered automatically or manually.
- Built campaign management: upload a CSV, select a template with placeholders and trigger campaigns manually.
- Integrated MSG91 (WhatsApp, SMS, email, IVR, click-to-call, OTP) and India Post APIs for booking legal notices and tracking them to delivery; repayments run through the in-house Payments Bridge.
- Used Redis for caching and AWS S3 for receipts, notices, documents and templates. Secured APIs with JWT and RBAC and documented them with Swagger.
- Processes about 14,000 cases a month in production, with ongoing production support and client change requests.

Gold AI Valuation Platform (Jul 2026 – Present)

Java 21, Spring Boot 3, PostgreSQL, AWS S3, JWT

- Designed the schema and backend APIs for a multi-tenant gold-ornament valuation middleware between the client frontend and five AI models: clarity check, ornament detection, fraud check, weight detection and stone segmentation.
- Uploaded ornament images to S3 and orchestrated the AI model calls, returning consolidated results to the frontend.
- Maintained the fraud reference dataset in S3 for cross-verification by the fraud model, and implemented loan amount calculation from the AI outputs.
- Implemented per-tenant configuration, JWT authentication and RBAC.

Java Developer | Virinchi Limited, Hyderabad, India

Jun 2022 – Mar 2025

Java 8, Spring Boot, Spring Security, Spring Data JPA, Hibernate, Oracle, SQL Server, React (frontend), Postman

- Built and maintained backend RESTful APIs for **Lendly**, a loan management application covering the full loan lifecycle (user management, loan validation, scheduling workflows), using Spring Boot and Spring Data JPA in a monolithic architecture for a React frontend team.
- Integrated third-party underwriting and validation services (CLARITY, MLA, FACTOR TRUST, EQUIFAX) over REST for credit, employment and income checks, managed via YAML configuration, and built internal underwriting logic (SSN, DOB, bankruptcy checks) in the Decision-Engine & Inquiry module. Reduced manual loan verification effort by 90%.
- Optimized SQL queries and database indexing, reducing query latency by over 40%.
- Implemented Spring Security with role-based access control, input validation, exception handling and standardized response structures.
- Applied Java 8 features (Streams, Lambdas), SOLID and Low-Level Design patterns (Singleton, Factory) to build reusable service-layer logic.
- Resolved 25+ production issues with zero post-release bugs; took full ownership of backend modules and delivered under tight deadlines. Awarded Employee of the Month within 3 months of joining.
- Mentored junior developers on clean code, SOLID, LLD patterns, REST API design and debugging; supported QA and frontend teams with Postman collections and response contracts.

EDUCATION

B.Tech in Electrical and Electronics Engineering – 75%, Vijaya Engineering College, Khammam, India (Sep 2017 – Sep 2020)

Diploma in EEE – 83%, Mother Teresa Institute of Science & Technology, Sathupally, India (Oct 2014 – Apr 2017)

CERTIFICATIONS

- Spring Boot (Essential Skills) – Scaler
- Master Java Concurrency & Multithreading – Scaler
- SQL Using AI – AI for Techies
